FOR IMMEDIATE RELEASE  
18<sup>th</sup> December 2018

### Photek achieves ISO 14001:2015 certification

EAST SUSSEX, UK, December 18th, 2018 – Photek has recently achieved certification to ISO 14001:2015 for its UK operations and scope. The internationally-recognised certification demonstrates Photek’s systems, processes and procedures are mature and robust, that they are regularly audited externally, and that the company is continually striving to improve how it identifies, manages, monitors and controls environmental issues. Customers benefit from the knowledge that Photek has built an

effective environmental management system into both its strategic business plan but also its day-to-day operations. From a regulatory perspective, this is a real benefit to customers, but also gives Photek the ability to demonstrate to prospective customers it’s continually driving improvement in environmental matters.

Terry Cummins, Photek QA Manager, said “This certification conveys to our customers our commitment to offer solutions considerate of environmental parameters and regulations. Our Quality Management System is fully integrated and certified against ISO 9001 and now 14001, which is a great achievement for Photek as we strive to continually improve all business areas.”

Gareth Jones, Photek MD added “This is a great step for Photek to demonstrate we have ISO 14001:2015 in place and we will build on this platform to further improve our systems and processes for our customers across everything we do in relation to environmental management. We need to be sensitive to environmental issues and this certification shows how highly we value their importance.”

Photek is a specialist manufacturer and global supplier of vacuum based tubes and camera systems for photon detection. Their comprehensive range of products includes Image Intensifiers, Solar Blind Detectors, Photomultipliers, Streak Tubes and a range of associated electronics and Camera Systems. Photek has a unique ability to partner with their customers to design, manufacture and support complete, bespoke solutions for the most demanding photon detection and imaging requirements. They are recognized as a global leader in the design and manufacture of large area image intensifiers, ultra-fast photomultiplier tubes (PMTs), UV detectors and advanced photon counting camera systems. Photek products support specialist applications in; Physics (high energy, particle, nuclear), defense industries (threat warning), physical chemistry, bioluminescence, space science, material and biological inspection.
